Assignment

By program *R* open package „*DplR*". Read data files „*Skrunda.txt*", and „*S5.txt*".

Check all tree ring data series from file „*S5.txt*" correlation with data series from file „*Skrunda.txt*" by function *corr.series.seg*.

For tree ring series without statistically significant correlation use function *ccrf.series.rwl* for crosdating. Save images created by this function. Include image in text document and write assumptions on possible error (missing or false tree ring and possible time period with error).

Please send document to address *didzis.tjarve@lu.lv*.
