Applications:

Holding Facilities
Care Organisations
Housing Units
Animal Breeders
Rescue Centres
Veterinary Clinics

Unrivalled Hygienic Door Solutions for Animal Holding Facilities

With a proven track record of success, manufacturing excellence and technical innovation that spans more than 35 years, Dortek is the leading supplier of high-quality hygienic doors to organisations that operate animal housing units. From facilities in Ireland and the UK, Dortek manufactures, supplies and installs its specialist Wen-Plast® doors worldwide.

Designed and constructed to industry leading standards, all our doors comply with the latest fire, DDA, hygiene and safety standards.

Specifically designed for your animal holding facility our door systems are extremely hardwearing and do not suffer the day to day wear that can be caused by the movement of trolleys and equipment.

More Choice

We offer a wide range of fire and non-fire rated hinged, sliding and automatic doors, designed specifically for use in animal housing facilities, demanding cleanroom environments, wet and wash down areas and personnel access areas. Colours are built-in to the door, do not require re-finishing and can be coded to match wall finishes. All doors can be specified with a wide range of ironmongery.

Strong and Durable

Tough and impact resistant, Dortek doors are built to last. Our standard finishes are all hard wearing and 'animal proof' so you can be assured that your animals are secure.

Unrivalled Hygiene

Unlike wooden, laminate or steel doors that harbour bacteria in joints and ledges the non-porous, inorganic surface of Dortek's moulded GRP construction means that the door is resistant to bacteria and water repellent, providing a cleaner, healthier environment for people and animals alike. All doors are fully compliant with the latest hygiene regulations and standards.

Safe and Secure

Because Dortek understands the need for high levels of security in animal facilities we offer a wide range of advanced automation and interlock systems including sensor and swipe card technologies as well as push button, keypad and key operation. Dortek doors can be fire rated up to 5 hours.

Class Leading Fire Performance

Incorporating a patented concealed intumescent strip in the door frame, Dortek GRP fire door sets are fire resistant for up to five hours and are tested to both EN and BS standards.

Maintenance Free

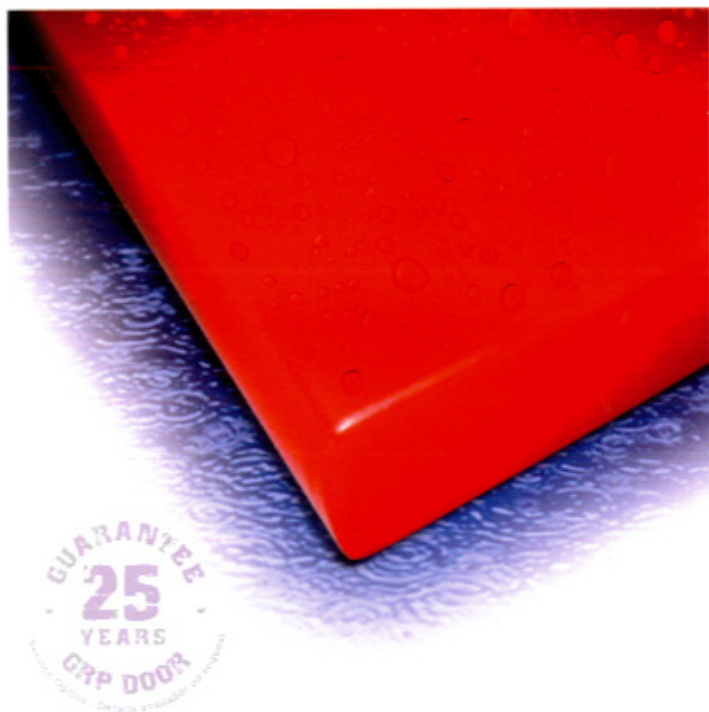

Our doors are virtually maintenance-free and require no painting or re-finishing. Impervious to water, they will not warp, rot, swell or rust. The smooth, seamless profile eliminates the need for unhygienic lips and ledges where dirt and germs can gather.

Total Support

We can provide a comprehensive project management service covering all phases of the installation process from door specification to successful project completion. Once your new doors are installed, you can rely on Dortek to ensure they remain in peak operating condition, year after year. Flexible service contract details are available upon request.
